

ZBI IMS – Invoice Management System by ZenBox Infinity

Born from practice, built for clarity — designed to simplify the invoice workflow and eliminate errors.

ZBI IMS is a professional **invoice-management desktop solution** developed by ZenBox Infinity for small and medium-sized businesses that value structure, automation, and visual clarity. Unlike online tools that depend on subscriptions, ZBI IMS works offline, preserves data locally, and offers full control over client records, pricelists, and invoices.

Core Features

- **Automated invoice creation** — generate professional invoices in seconds.
- **Client & pricelist database** — store and update data without limits.
- **Flexible editing environment** — easily modify data before issuing invoices.
- **PDF export & archive folders** — every invoice is automatically saved
- **Error-reduction logic** — eliminates duplicate entries and data mismatches.
- **Multi-language interface (SRB/ENG)** — for local and international invoicing.
- **Integrated logging and license system** — track activity and upgrade instantly.

Why it matters

ZBI IMS transforms invoicing from a routine task into a streamlined business process. By keeping all data inside a secure local database, it prevents data loss and improves efficiency. Companies gain a clear audit trail, organized records, and consistent invoice formats that project professionalism toward clients and accountants.

 **Perfect for:** entrepreneurs, accountants, SMEs, and controllers who need speed and accuracy without complex systems.

Technology & Integrity

Built on Python with SQLite database and PyQt interface, ZBI IMS combines analytical precision and user-friendly design. It follows the same principle as the ZBI FMS — **clarity, structure, and freedom from subscriptions.**
